

ABSTRACT OF THE DISCLOSURE

The present invention relates to a communication service apparatus based on a personal identifier in an internet network and a method of the same. In the present invention, it is possible to identify a URL of a personal home page, an e-mail account and a currently used terminal by registering an unique personal identifier and to access using only personal identifier irrespective of a location of an internet user and a variation of a user terminal. In addition, a real time communication between subscribers is implemented. In addition, it is possible to manage various internet application services(home page, e-mail, etc.) that a subscriber has in the internet using a unique personal identifier.

"Express Mail" mailing label number EL649977725US
